Millstone is a fast growing, fast paced medical service provider for the top Orthopedic companies in the industry. Millstone's business focus is sterile and non-sterile packaging of medical devices. Millstone also engages in other activities, such as mechanical inspection and assembly, which are designed to meet the outsourcing requirements of medical device manufacturers seeking to reduce costs while maintaining high levels of quality, accuracy, and timeliness. We are FDA and ISO registered and employ a detailed internal quality system to ensure ISO compliance.

JOB SUMMARY:

Millstone is seeking an energetic and engaged Manufacturing Engineer II to identify and drive continuous improvement. As our Manufacturing Engineer II, you will be responsible for developing and implementing mistake-proof processes, equipment, and tooling used to execute on critical cleaning and sterile packaging of orthopedic medical devices.

Manufacturing Engineering (ME) is responsible for equipment selection, installation, validation, maintenance and calibration, improvements, documentation, spare parts, and of course Product Quality. As a Manufacturing Engineer II, you will be in a position to ensure our legacy product lines are continuously improved and new product lines transition smoothly into full production, all while adhering to financial and scheduled commitments.

RESPONSIBILITIES:

- Provide technical leadership and guidance for product quality, process compliance with all applicable regulations, Millstone quality system requirements, applicable safety standards, and policies
- Oversee development and implementation of timely, economical, repeatable, validated, mistake-proof manufacturing processes and controls for new and legacy products
- Drive continuous improvement and lean manufacturing methodologies into production
- Responsible for timely equipment troubleshooting and repair, development of systems and procedures to be used for product quality and process capability improvements

- Trend preventive maintenance and calibration data for end-of-service predictions using predictive analytics
- Collaborate and partner with various departments to investigate and troubleshoot process or equipment issues, and to implement specific corrective actions using PFMEA, root cause analysis, and other risk management methodologies
- Act as an integral member of project teams tasked with resolving technical issues or continuous improvement projects
- Collaborate with program development on new product launches and product transfers to manufacturing. Develop and conduct Factory Acceptance Tests and equipment validation ensuring a high degree of process capability.
- Responsible for all necessary documentation and approvals; standard operating procedures, work instructions, and assist with related training
- Develop workable project plans and timelines to meet goals
- Develop workplan and measurement data templates within the regulatory asset manager
- All other duties as assigned

KNOWLEDGE & SKILLS:

- B.S. Degree in Engineering with 2-5 years of experience in medical device processing/manufacturing engineering/product development.
- Must be able to work on the 2nd shift
- Ability to work in a fast-paced environment with multiple priorities
- Exemplary verbal and written communication and organizational skills
- Ability to work with a team or independently with minimum supervision
- OEE, GMP Practices, lean certified, black belt in six sigma and Minitab proficiency is highly preferred
- Knowledge of, or experience with, automated systems or UV glue system is a plus

*****THIS POSITION IS NOT ELIGIBLE FOR RELOCATION ASSISTANCE &/OR VISA SPONSORSHIP. *****
